Trayport

Power Markets Continue to Fluctuate

Nobody could predict two years ago that the European forward power prices which were bouncing between 60-70 €/MWh would reach an unprecedented boom and rise up to €80-100/MWh, before crashing to €40-50/MWh.

The Continental European power curve contracts struggle to recover lost ground over the last 15 months. The downward curve of the price is more than €30/MWh down year-on-year.

Trayport's Trading Gateway provides access to all major brokers and exchanges in the UK and European power markets. No matter where or how you trade, Trading Gateway facilitates Cleared, OTC and OTC Cleared trading in the most efficient way. By displaying the entire market on a single screen, opportunities are easily identified and executed across multiple execution venues. Trading Gateway allows cross commodity spreads to be viewed and traded quickly and simply, ensuring seamless trading and fewer missed opportunities.

About Trading Gateway

Trayport's Trading Gateway platform is the largest distributed trading platform for executing European Commodities and Energy forwards and futures. Trading Gateway was designed to sit at the centre of trading operations for companies trading Commodities and Energy, to make order routing to multiple Inter Dealer Brokers & Exchanges straightforward. It is also designed to support Straight-through-Processing, implied price calculation, automated trading and allow integration with third party tools including analytical, stream-based processing & ETRM systems.

Trading Gateway's central role makes Trayport the best strategic partner to engage with when building a new trading desk, we often advise clients on compatibility and work as a partner with our clients to help them grow their trading desks, to uncover new trading opportunities, and build out all the infrastructure around the trading platform. Trayport should be the first system you look at when building a new trading operation or starting a new trading desk.
